

Reusable straw: In the US & UK, nearly 550 million plastic straws are thrown away every day. Most of these straws end up in landfills. Unfortunately far too many are found entering our sewers, waterways, parks, and Oceans. Plastic straws take hundreds of years to break down (or longer). Stainless steel straws are easy to clean, they are durable and dishwasher safe, they don't rust over time, and they can be used over and over again!

Bamboo lid: Made of pure natural bamboo material, this lid is light-weight, durable, and 100% biodegradable! Bamboo is a highly sustainable plant. Bamboo can grow to full size in just 3-4 months, compared to standard trees which can take 30+ years to grow and are not always sustainably harvested.

Glass jar: Glass jars are BPA-free, 100% recyclable, and can be recycled endlessly without any loss in purity or quality. Recycling 1 ton of glass can save 1 ton of natural resources.
